Ft. Wayne, Indiana

Att: Mr. Paul Fulkerson

Dear Paul;

We respectfully offer the following proposal to repair the lower bearing and bearing journal of your St. Joe Hydro-Electric Generator. The work scope will be as follows:

Machine rabbet fit fixture to hold bearing casting.

Re-babbit and machine lower bearing as located by rabbet fit. Note: Bearing will be undersize to accomodate new shaft dimension,

Fabricate fixture to steady and machine the shaft at the lower journal.

Machine the shaft on site.

Net Total \$ 7,220.00

We hope this offer meets with your approval.

Sincerely,

D.L. Witham, Mgr.

"The price stated herein shall be subject to adjustment at the date of shipment. Any such adjustment hereunder shall be equal to any percentage adjustment in the Company's published prices and applicable discounts from the date of the order to the date of the shipment.

In the event the Company had been delayed for any of the causes specified in the clause entitled "Excusable Delays" which is set forth in the Company's Conditions of Sale "shipment" shall mean the actual date of shipment."

Memorandum

To Dr. Jerry Boswell, Chairman, Board of Works Date 8/12/75
From Mort Mendel, Gen. Supt., Operations, City Utilities
Subject PURCHASE ORDER # 7035 ST. JOE DAM TURBINE REPAIR

COPIES TO:

Paul Fulkerson

Mr. Fulkerson and I respectfully request that you approve and forward to Common Council for prior approval the attached purchase order covering repair to lower bearing and bearing journal of our St. Joe Hydro-Electric Generator, including machining the shaft on-site (which escalates the price considerably).

The generator saves us approximately \$15,000 in purchased power costs per year.

As you recall, the shaft of the generator experienced problems in 1974, and was removed with original intent to rebabbitt and machine the large bearing, ring etc. metal spray and machine rotor shaft, straighten the rotor shaft and also service the stator and armature all for an estimated cost of \$4,675.40.

When the shaft and wheel was removed, machined and inspected, a deep crack in the rotor shaft made it impossible to save the shaft, and additional work was required to machine a complete new shaft with required key ways, collar grooves, etc. and reinstall the new shaft with coupling back in the rotor for an additional \$3,680.00. This was done in late 1974 and early 1975.

The generator was put back into service, and, after operating for a time, it was discovered that the lower bearing and bearing journal fit was not adequate to maintain sustained operations hence, the current (and hopefully, final) request to rework the lower bearing etc.

The additional work is quoted at \$7,220.00, making total investment to date \$15,575.40.

Mr. Fulkerson and I debated the advisability of foregoing this request and taking the generator out of service, or considering a new installation. We discarded both alternative options in favor of the current request, since we feel there is high probability that this final step will result in generator in-service operating condition.

If you wish to discuss this matter further with Paul, he is available.
